Date: _____

Ecosystems

An ecosystem is a place where animals, plants, and people live together. In an ecosystem, everything works together to stay healthy. Trees give homes to birds and shade to other plants. Animals eat plants or other animals. Water, sunlight, and air help all things in the ecosystem grow. We can help keep ecosystems clean and safe.

Where do animals, plants, and people live together?

What do trees give to birds in the ecosystem?

How can we help keep ecosystems safe?
