# Electricity

Electricity is a kind of energy that helps us use things like lights, fans, and televisions. We get electricity from power plants, and it travels through wires to our homes and schools. Some things like batteries, can also store electricity. We must be careful with electricity because it can be dangerous if we touch electrical wires or plugs with wet hands. We use switches to turn electricity on or off when we need it.

What are some things that use electricity at home?
