

Name: _____

Date: _____

Food Chains

Grade 2

A food chain shows how living things get their food. First, plants make their own food from sunlight. Then, small animals like grasshoppers eat the plants. Next, bigger animals such as birds eat the grasshoppers. The food chain helps all living things get the energy they need to live and grow.

What is the first thing in a food chain?

Why do bigger animals need to eat smaller animals in a food chain?

How do plants get their food?
