# Geometry Fractions

Geometry is the study of shapes like circles, squares, and triangles. We can find these shapes around us, such as a clock that looks like a circle or a window shaped like a square. Sometimes, we share things with friends by dividing them into equal parts called fractions. For example, if you cut a pizza into four equal slices and eat one slice, you have eaten one out of four slices. That means you ate one-fourth of the pizza!

What are some shapes we learn about in geometry?

---

If you cut a sandwich into two equal pieces, what fraction of the sandwich is one piece?

---

Where can you find a shape like a circle in your home?

---
