

Name: _____

Date: _____

Gravity

Gravity is a force that pulls things toward the Earth. When you jump up, you come back down because gravity is always pulling you. If you drop a pencil, gravity makes it fall to the ground. Gravity also keeps the Moon going around the Earth and the planets going around the Sun. Without gravity, we would float away, and everything around us would not stay in place!

What does gravity do to things that are not held?

Why do the planets go around the Sun?

What would happen if there was no gravity?
