# History of Life on Earth

Millions of years ago, Earth was very different from how it is today. At first, there were only tiny living things in the oceans. Over a long time, plants began to grow, followed by animals crawling out onto the land. Eventually, huge dinosaurs walked the Earth.

After the dinosaurs disappeared, mammals like elephants and monkeys became common.

Today, many different animals and plants live all around the world.

What kind of living things were the first to appear on Earth?

\_\_\_\_\_

What happened after dinosaurs disappeared from Earth?

\_\_\_\_\_

Name two types of mammals mentioned in the passage.
