# Human, Capital and Natural Resources

Resources help people do their jobs every day.

Human resources are the workers who help make things or give services, like teachers, doctors, or bakers.

Natural resources come from nature such as water, trees, and soil.

Capital resources are special tools or machines people use to help them work, like computers, trucks, or hammers. When these resources work together, we can build schools, make clothes, or bake bread.

? What are three kinds of resources people use to do their jobs?

\_\_\_\_\_

? Give one example of a natural resource from the passage.

\_\_\_\_\_

? Who is an example of a human resource?
