# Interdependence of Man and Nature

People, animals, and plants all need each other to live and grow. Trees provide us with fresh air to breathe and shade to keep us cool. Animals help plants by spreading their seeds and helping flowers grow. People use plants and animals for food, clothes, and homes. When we protect nature, we are taking care of ourselves too.

Everything in nature is connected like a big, helpful family.

How do trees help people?

---

Why is it important for people to protect nature?

---

Give one way animals help plants.

---
