

Name: _____

Date: _____

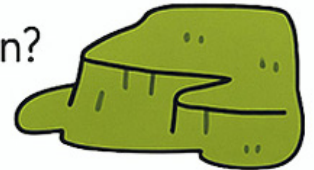

Landforms

Landforms are the different shapes we see on the surface of the Earth. Mountains are tall and rocky, and hills are smaller than mountains but still rise above land. Valleys are low areas between hills or mountains. Plains are large, flat areas, while plateaus are flat land that is higher than the land around it. Rivers flow through some landforms and can help shape them. All these landforms make our Earth interesting and different in every place.

What is the difference between a hill and a mountain?

Name two landforms mentioned in the passage.

How do rivers help shape landforms?
