MEASUREMENT AND DATA

We use measurement to find out how big, long, or heavy something is. We can compare different things by looking at their size, length, or weight. For example, we can see which book is taller, which toy is shorter, or which fruit is heavier. We can also sort objects by how they look or feel, such as soft toys and heavy blocks. Measurement helps us understand the world around us.

Which things can you compare using measurement?

What are some ways we can sort objects?

Why do we use measurement. _____
