# Natural Resources

Natural resources are things found in nature that people use to live. Some common natural resources are water, soil, air, plants, and animals. People need water to drink and grow food. Trees give us wood to build houses and make paper. We get food from plants and animals. Rocks and minerals from the earth are used to make many things, like cars and computers. It is important to take care of our natural resources so we have them for a long time.

**What are three examples of natural resources mentioned in the passage?**
