Operations and Algebraic Thinking

Sara has 10 apples. She gives 3 apples to her friend Tom. Then their teacher gives Sara 4 more apples. Now, Sara wants to find out how many apples she has in all. She thinks carefully and adds the apples she has. Operations like adding and taking away are called addition and subtraction. These help us solve problems every day!

How many apples does Sara have after giving 3 to Tom?

_____

How many apples does Sara have after the teacher gives her 4 more apples?

_____

What is the name of the operation when we add apples together?

_____
