

Name: _____

Date: _____

States of Matter

Matter is all around us. Everything we see and touch is made of matter.

Matter can be a solid, a liquid, or a gas. Solids, like ice or a rock, keep their shape. Liquids, like water and juice, can be poured and take the shape of their container. Gases,

like the air we breathe, can spread out and do not have a shape of their own.

What is matter made of? _____

What are two examples of solids? _____

How is a liquid different from a solid?
