Trees and Leaves

Trees are very important plants that grow tall and strong. They have roots that hold them in the ground, a trunk that stands straight, many branches, and lots of leaves. Leaves come in many shapes and sizes. In the fall, some leaves change color and fall off the trees. Trees give us shade, fresh air, and homes for birds and animals.

What are some parts of a tree?

What happens to some leaves in the fall?

Why are trees important?
